Art Unit: 3724

1. Claims 2,4 and 5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 7.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1 and 3 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In the specification, there is mentioned a "blade bias" and an "adjustable bias". It is not clear what the "bias" is. What structure is being recited here? Is there a spring bias?

4. Claims 1 and 3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

On line 2 of claim 1, "a bias" is not understood, as set forth above.

Claims 1 and 3 appear to be rough translations from the original German, and are difficult to read and understand, as set forth below.

In claim 1, the phrase "the controlling system connected to a signal transmitter for a preset position of rotation of the slider-crank drive controls the motor in dependence on the response of the signal transmitter" is grammatically odd and is not understood.

In claim 1, "the cutting speed" lacks proper antecedent basis.

In claim 1, the phrase "one conveying step adaptable to the respective stroke frequency" is not of clear scope. Pretty much anything is "adaptable" to be something else, and it is not clear what type of relationship is being adapted to.

On line 3 of claim 3, the term "one" is unclear in it's referencing.

On lines 3 and 4 of claim 3, the term "the saw blade disengagement" lacks positive antecedent basis.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claim 1, as can be understood, is rejected under 35 U.S.C. 102(b) as being anticipated by Traben, who shows a blade (47), a sliding crank (41), a signal transmitter (21), and a motor (see figure 3). A "stored control program" (figures 4,5) causes one-step workpiece advancement per blade stroke.

Art Unit: 3724

7. Claim ³2 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

8. Made of record but not relied on are patents to Meltzer et al., Smith and Stolzer showing saw blades with coordinated workpiece feeding.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ken Peterson whose telephone number is 703-308-2186. The examiner can normally be reached on Monday thru Thursday between 7am and 4pm. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Allan Shoap can be reached on 703-308-1082.

In lieu of mailing, it is encouraged that all formal responses be faxed to 703-872-9302. Any inquiry of a general nature or relating to the status of this application should be directed to the receptionist whose telephone number is 703-308-1148.
